Configuration Questions – ANSWERED!

When does the suggested retail pricing show on the Design-A-Badge Web Page?

- ☑ When Design-A-Badge runs in Public Mode
- ☑ When Design-A-Badge runs in Integration Mode and *SWITCH #0* is set to "1"

When does the <u>dealer</u> receive an email when the Design-A-Badge runs in Public Mode?

- ☑ Even if the dealer is listed on screen in the Design-A-Badge, the dealer will not receive an email unless the "dealer_dab_prg" table field is set to "1". This field is located within the DEALERS table.

What email address is used when sending emails to a <u>dealer</u> when Design-A-Badge runs in Public Mode?

- ☑ Email addresses are used from the DEALERS table, located within SQL Server

- ☑ If table field "dealer_co_email" is populated with an address, then it is used. Otherwise, table field "dealer_email" is used.

How will the <u>subject</u> line of the email sent to both customers and dealers read?

- ☑ When Design-A-Badge runs in Public Mode, the subject line of the email will read "Blackinton Design-A-Badge Customer Design".
- ☑ When Design-A-Badge runs in Integration Mode, the subject line of the email will read "Blackinton - Quote Request: #", with the quote number being the numeric portion of the VHB######## transaction ID.

When is suggested retail pricing included in the emails to both dealers and customers?

- ☑ When DAB runs in Public Mode or Integration Mode, if *SWITCH #0* is set to "1", then suggested retail pricing is displayed within the email body.

When can emails be sent to more than one <u>dealer</u> for single Design-A-Badge transaction?

- ☑ ONLY when Design-A-Badge runs in Integration Mode, the _emailTo field can contain multiple valid SMTP email addresses separated by a semicolon.
- ☑ In Public mode only a single dealer email address can be used.

When is the REPLY-TO ADDRESS of the email sent to <u>dealers</u> changed?

☑ ONLY when the Design-A-Badge application is running in Integrated Mode, can the FROM address of emails being sent to dealers be changed.

☑ If *SWITCH #6* is set to "1", then the dealer emails will be sent with an email "reply address" that is provided by the customer when filling out the contact information web page.

☑ The FROM address will be "Design-A-Badge@blackinton.com"

When is the REPLY-TO ADDRESS of the email sent to <u>customers</u> changed?

☑ ONLY when the Design-A-Badge application is running in Integrated Mode, can the FROM address of emails being sent to customers be changed.

☑ If *SWITCH #6* is set to "1", then the dealer emails will be sent with an email "Reply-To address" that is provided by the _emailTo filed. If multiple email addresses are specified within the _emailToField, then the FIRST email address will be used as the email "Reply-to field".

☑ The FROM address will be "Design-A-Badge@blackinton.com"

How can the Address field on the "YOUR CONTACT INFORMATION" (STEP 6) of the Design-A-Badge application be made required?

☑ In either Public or Integrated mode, the Street Address field can be set as required. By default it is NOT required.

☑ To make the Street Address field required, set *SWITCH #5* is set to "1".

How can the amount of screen space the Design-A-Badge application used when rendering in the Web Browser when Integration Mode be reduced?

☑ In Integration Mode, settings *SWITCH #2* to "1" will suppress the header and left region, resulting in a smaller screen "footprint".

Can the QTY field be forced to show up on the Design-Canvas (STEP 3) of the Design-A-badge application when in Integration Mode?

☑ By default, the QTY field will show up when the Design-A-Badge application is running in Public Mode. To enable the QTY field in Integration Mode, set *SWITCH #4* to "1". Note that if the QTY field is suppressed, a QTY of 1 is returned.

Can the BUTTON FACE displayed on the final step of the Design-A-Badge application (STEP 7) be changed to something other than "EXIT"?

☑ Setting the _buttonText to value other than "Exit" will render the value on the BUTTON FACE.
